

Yashasvi Shukla

Ghaziabad, India | 9773548452 | yashasvi.shukla.me@gmail.com | [LinkedIn](#) | [Github](#) | [Portfolio](#)

SUMMARY

Full-stack engineer focused on building scalable backend systems and AI-powered platforms. Experienced in distributed services, containerized deployments, applied NLP systems, and MLOps workflows including experiment tracking and model deployment.

EDUCATION

KIET Group of Institutions

Master of Technology in Computer Science and Engineering

2024 – 2026

Delhi-NCR, Ghaziabad

RKGIT, Ghaziabad

Bachelor of Technology in Computer Science and Engineering

2019 – 2023

Delhi-NCR, Ghaziabad

PROJECTS

CodeForge - Distributed Coding Platform | *React, Node.js, Express, MongoDB, Docker, Judge0* | Live | GitHub

- Designed and developed a full-stack coding platform supporting problem management, user authentication, and asynchronous submission evaluation
- Implemented secure multi-language code execution using Docker containers integrated with Judge0
- Built judging pipelines for compilation, runtime execution, and automated verdict generation
- Architected scalable backend services handling submissions, test case validation, and execution workflows

TalentForge - Resume Intelligence Platform | *Python, FastAPI, NLP, Scikit-learn* | Live | GitHub

- Built an AI-powered resume intelligence system that analyzes resumes and matches them with job descriptions
- Implemented NLP pipelines for skill extraction, semantic similarity scoring, and candidate ranking
- Exposed machine learning inference through RESTful APIs using FastAPI

ModelForge - AutoML & MLOps Platform | *Python, MLflow, Docker, AWS, FastAPI* | Live | GitHub

- Developed an MLOps platform for training, tracking, and deploying machine learning models
- Integrated MLflow for experiment tracking, model versioning, and artifact management
- Implemented automated training pipelines supporting multiple algorithms and hyperparameter configurations
- Containerized model inference services using Docker and deployed APIs on cloud infrastructure

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL

Backend & Web: Node.js, Express, FastAPI, React, Next.js, REST APIs

Databases: MySQL, MongoDB, PostgreSQL

Infrastructure: Docker, AWS, Prometheus

Core Concepts: Data Structures & Algorithms, System Design, JWT Authentication, AI and ML

ACHIEVEMENTS & PROBLEM SOLVING

- Solved 100+ Data Structures and Algorithms problems on LeetCode and practiced competitive programming on Codeforces
- Authored research papers on *Reinforcement Learning for Memory Management in Language Model Agents* and *Retrieval-Augmented Generation Systems*
- Built multiple end-to-end machine learning systems involving data preprocessing, model training, evaluation, and deployment
